HAZ METAL - Anchor Channel HMPR

Product family  
to which the construction product belongs

Anchor channels

Manufacturer

HAZ Metal Deutschland GmbH  
Alfred-Zippe-Straße 1  
97877 Wertheim

Manufacturing plant

HAZ Metal AS Iskenderun Türkiye

This European Technical Assessment  
contains

35 pages including 3 annexes which form an integral part  
of this assessment

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

EAD 330008-03-0601, Edition 06/2021

This version replaces

ETA-17/0549 issued on 12 November 2019

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## Specific part

### 1 Technical description of the product

The HAZ METAL - Anchor Channel HMPR is a system consisting of C-shaped channel profile of carbon steel or stainless steel and at least two metal anchors non-detachably fixed to the channel back and channel bolts.

The anchor channel is embedded surface-flush in the concrete. HAZ METAL channel bolts with appropriate hexagon nuts and washers are fixed to the channel.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor channel is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor channel of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance under tension load (static and quasi-static loading)	
- Resistance to steel failure of anchors	$N_{Rk,s,a}$ see Annex C1
- Resistance to steel failure of the connection between anchors and channel	$N_{Rk,s,c}$ see Annex C1
- Resistance to steel failure of channel lips and subsequently pull-out of channel bolt	$N_{Rk,s,l}^0 ; S_{l,N}$ see Annex C1
- Resistance to steel failure of channel bolt	$N_{Rk,s}$ see Annex C2
- Resistance to steel failure by exceeding the bending strength of the channel	$S_{max}$ see Annex A5 $M_{Rk,s,flex}$ see Annex C1
- Maximum installation torque to avoid damage during installation	$T_{inst,g} ; T_{inst,s}$ see Annex B4 and B5
- Resistance to pull-out failure of the anchor	$N_{Rk,p}$ see Annex C3
- Resistance to concrete cone failure	$h_{ef}$ see Annex B3 $k_{cr,N} ; k_{ucr,N}$ see Annex C3
- Minimum edge distances, spacing and member thickness to avoid concrete splitting during installation	$S_{min}$ see Annex A5 $c_{min} ; h_{min}$ see Annex B3
- Characteristic edge distance and spacing to avoid splitting of concrete under load	$S_{cr,sp} ; c_{cr,sp}$ see Annex C3
- Resistance to blowout failure - bearing area of anchor head	$A_h$ see Annex A4

Continued Table 3.1:

Essential characteristic	Performance
<p>Characteristic resistance under shear load (static and quasi-static loading)</p> <ul style="list-style-type: none"> <li>- Resistance to steel failure of channel bolt under shear loading without lever arm</li> <li>- Resistance to steel failure by bending of the channel bolt under shear load with lever arm</li> <li>- Resistance to steel failure of channel lips, steel failure of connection between anchor and channel and steel failure of anchor (shear load in transverse direction)</li> <li>- Resistance to steel failure of connection between channel lips and channel bolt (shear load in longitudinal channel axis)</li> <li>- Factor for sensitivity to installation (longitudinal shear)</li> <li>- Resistance to steel failure of the anchor (longitudinal shear)</li> <li>- Resistance to steel failure of connection between anchor and channel (longitudinal shear)</li> <li>- Resistance to concrete pry-out failure</li> <li>- Resistance to concrete edge failure</li> </ul>	<p><math>V_{Rk,s}</math> see Annex C6</p> <p><math>M_{Rk,s}^0</math> see Annex C7</p> <p><math>V_{Rk,s,l,y}^0 ; S_{l,V} ; V_{Rk,s,c,y} ; V_{Rk,s,a,y}</math> see Annex C4</p> <p><math>V_{Rk,s,l,x}</math> see Annex C5</p> <p><math>\gamma_{inst}</math> see Annex C5</p> <p><math>V_{Rk,s,a,x}</math> see Annex C5</p> <p><math>V_{Rk,s,c,x}</math> see Annex C5</p> <p><math>k_8</math> see Annex C4</p> <p><math>k_{cr,V} ; k_{ucr,V}</math> see Annex C4</p>
<p>Characteristic resistance under combined tension and shear load (static and quasi-static load)</p> <ul style="list-style-type: none"> <li>- Resistance to steel failure of the anchor channel</li> </ul>	<p><math>k_{13} ; k_{14}</math> see Annex C8</p>
<p>Characteristic resistance under fatigue tension loading</p> <ul style="list-style-type: none"> <li>- Fatigue resistance to steel failure of the whole system (continuous or tri-linear function, test method A1, A2)</li> <li>- Fatigue limit resistance to steel failure of the whole system (test method B)</li> <li>- Fatigue resistance to concrete related failure (exponential function, test method A1, A2)</li> <li>- Fatigue limit resistance to concrete related failure (test method B)</li> </ul>	<p><math>\Delta N_{Rk,s,0,n}</math> see Annex C10</p> <p><math>\Delta N_{Rk,s,0,\infty}</math> see Annex C12</p> <p><math>\Delta N_{Rk,c,0,n} ; \Delta N_{Rk,p,0,n}</math> see Annex C11</p> <p><math>\Delta N_{Rk,c,0,\infty} ; \Delta N_{Rk,p,0,\infty}</math> see Annex C12</p>
<p>Displacements (static and quasi-static load)</p>	<p><math>\delta_{N0} ; \delta_{N\infty}</math> see Annex C9</p> <p><math>\delta_{V,y,0} ; \delta_{V,y,\infty} ; \delta_{V,x,0} ; \delta_{V,x,\infty}</math> see Annex C9</p>

### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	$N_{Rk,s,fi}$ ; $V_{Rk,s,y,fi}$ see Annex C13

### 3.3 Aspects of durability linked with the Basic Works Requirements

Essential characteristic	Performance
Durability	See Annex B1

#### Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330008-03-0601, the applicable European legal act is: [2000/273/EC].

The system to be applied is: 1

### 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 2 August 2024 by Deutsches Institut für Bautechnik

### HAZ METAL - Anchor Channel HMPR

#### Product Description

HSK Channel bolts: Dimensions,  
HS, HAZ and HSK: Strength grade

### Annex A7

## Specifications of intended use

### Anchor channel and channel bolts subject to:

- Static and quasi-static tension, shear perpendicular to the longitudinal axis of the channel
- Static and quasi-static shear in the direction of the longitudinal axis of the channel (anchor channels 40/22P, 50/30P, 53/34P with notching bolts Type HSK)
- Fatigue cyclic tension loading (anchor channels with channel bolts for assessment methode A1, A2 and B according to Annex C10)
- Fire exposure for concrete class C20/25 to C50/C60 for tension and shear perpendicular to the longitudinal axis of the channel (anchor channels and channel bolts according to Annex C13)

### Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C20/25 to C90/105 according to EN 206-1:2000
- Cracked or uncracked concrete

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (anchor channels and channel bolts according to Annex A3, Table 1, column 3-7)
- Structures subject to internal conditions with usual humidity (e.g. kitchen, bath and laundry in residential buildings, except permanently damp conditions and application under water) (anchor channels and channel bolts according to Annex A3, Table 1, column 4-7)
- According to EN 1993-1-4:2006+A2:2015 relating to corrosion resistance class CRC III (anchor channels and channel bolts according to Annex A3, Table 1, column 5-7)
- According to EN 1993-1-4:2006+A2:2015 relating to corrosion resistance class CRC IV (anchor channels and channel bolts according to Annex A3, Table 1, column 6-7)
- According to EN 1993-1-4:2006+A2:2015 relating to corrosion resistance class CRC V (anchor channels and channel bolts according to Annex A3, Table 1, column 7)

### Design:

- Anchor channel are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor channel and channel bolts are indicated on the design drawings (e.g. position of the anchor channel relative to the reinforcement or to the supports)
- For static and quasi-static loading as well as fire exposure the anchor channels are designed in accordance with EN 1992-4:2018, EOTA TR 047 "Design of Anchor Channels", May 2021.
- For fatigue loading the anchor channels are designed in accordance with EOTA TR 050 "Calculation Method for the Performance of Anchor channels under Fatigue Loading", June 2022.
- The characteristic resistances are calculated with the minimum effective embedment depth.

## HAZ METAL - Anchor Channel HMPR

Intended use  
Specifications

**Annex B1**

**Installation:**

- The installation of anchor channels is carried out by appropriately qualified personnel under the supervision of the person responsible for the technical matters on site.
- Use of the anchor channels only as supplied by the manufacturer -without any manipulations, repositioning or exchanging of the channel components.
- Cutting of anchor channels is allowed only if pieces according Annex A5, Table 4 are generated including end spacing and minimum channel length and only to be used in dry internal conditions. (Annex A3, Table A1, column 3-4). For anchor channels made of stainless steel there are no restrictions regarding corrosion resistance when using cut channel pieces, if cutting is done professionally and contamination of cut edges with corrosion material is avoided.
- Installation in accordance with the manufacturer's specifications given in Annexes B7 to B9.
- The anchor channels are fixed on the formwork, reinforcement such that no movement of the channels will occur during the time of laying the reinforcement or auxiliary construction of placing and compacting the concrete.
- The concrete under the head of the anchors is properly compacted. The channels are protected from penetration of concrete into the internal space of the channels.
- Washer may be chosen according to Annex A3 and provided separately by the user.
- Orientating the channel bolts (groove according to Annex A6 and A7) rectangular to the channel axis.
- The installation torques given in Annex B4 and B5 shall be applied and shall not be exceeded.

**HAZ METAL - Anchor Channel HMPR**

**Intended use**

Installation parameters of HAZ METAL - Notching channel bolts Type HSK

**Annex B6**

Fig. 1

**General:**

The fixture is in contact with the channel profile and the concrete surface.

The installation torques according to Annex B4, Table 10, Annex B5, Table 11 and Annex B6, Table 12 shall be applied and shall not be exceeded.

Fig. 2

**Steel - Steel Contact:**

The fixture is not in contact with the concrete surface. The fixture is fastened to the anchor channel by suitable steel part (e.g. washer).

The installation torques according to Annex B4, Table 10, Annex B5, Table 11 and Annex B6, Table 12 shall be applied and shall not be exceeded.

**HAZ METAL - Anchor Channel HMPR**

**Intended use**  
Positions of the fixture

**Annex B7**

### 1. Fixing anchor channel

Install the channel surface flush and fix the channel undisplaceable to the formwork or to the reinforcement

#### a) Fixing to steel formwork

With HAZ METAL channel bolts and nuts, with rivets cramps or with magnetizing fixings.  
or

#### b) Fixing to timber formwork

With nails through the pre-punched holes in the back of the channels and with staples.  
or

#### c) Fixing of anchor channels at the top

- To timber batten on the side formwork (e.g. with HAZ METAL channel bolts)
- Fixing from above directly to the reinforcement or to a mounting rebar, attach the channel by wire binding.

### 2. Pouring concrete and regular compacting of concrete

Compact the concrete properly around the channel and the anchors.

a) Sidefaces to the formwork

b) in soffits

c) into top surfaces of concrete up stands

### 3. Removing of the channel infill

Clean the channel on the outside after removing the formwork

#### a) Foam infill

With a hammer or a hook or

#### b) PE - foam infill

By hand or with help of a screw driver in one piece

## HAZ METAL - Anchor Channel HMPR

### Intended use

Installation instructions for HAZ METAL anchor channels

## Annex B8

#### 4. Fastening the HAZ METAL channel bolt to the anchor channel

Fig. 1

Fig. 2

##### a) Setting torques (General)

1. Insert the HAZ METAL channel bolt into the channel slot at any point along the channel length (Fig.1)
2. Turn the channel bolt 90° clockwise and the head of the screw locks into position (Fig.1)
3. Do not mount the channel bolt close than 25 mm resp. 35 mm (HMPR 54/33) from the end of the channel.
4. Use the washer under nut (Fig.1)
5. Check the correct fit of the screw. The groove on the shank end of the channel bolt must be perpendicular to the longitudinal axis.
6. Tighten the nuts to the installation torque according to Table 13, 14 and 15 (Fig.2). The installation torque must not be exceeded.
