1) The 6mm anchor is to be used only for multiple anchor redundant non-structural systems in concrete. Higher design capacities are possible depending on specific system arrangement (up to 3.0kN).

2) Without concrete edge or anchor spacing influence. This table contains preliminary design information only. Please refer to our AFOS Anchor Design Software and the ETA for more details.

3) Based on a volume of 400+ to 1000+ fixings, as of January 2023.

4) The 16mm anchor is not NCC compliant in the absence of ETA data for this diameter. Capacities are given for uncracked concrete only with an ULS capacity reduction factor of 0.6.

Installation Parameters

Anchor Size		[mm]	6	8	10	12	16
Nominal diameter of drill bit	d_o	[mm]	6	8	10	12	16
Fixture clearance hole diameter	d_f	[mm]	9	11	13	15	19
Minimum edge distance	c_{min}	[mm]	40	50	60	70	90
Minimum spacing	s_{min}	[mm]	40	50	60	70	90
Nominal installation torque (torque wrench)	T_{inst}	[Nm]	20	40	60	80	100
Max. power output, power tool setting	T_{max}	[Nm]	80	185	350	350	450

The minimum embedment depths are specified based on ETA values tested and are required for NCC compliance and design according to AS 5216. For non-safety critical applications, smaller embedment can be used.

Installation Instructions:

Drill hole preparation and cleaning		Install concrete screw-anchor	
1		<p>Drill hole perpendicular to concrete surface. Using a vacuum drill, continue with step 3.</p>	
2		<p>Blow out dust or alternatively vacuum clean down to the bottom of the hole.</p>	
3		<p>Screw in anchor by using a torque wrench or impact driver. Apply installation torque T_{inst} by using a calibrated torque wrench or by tool setting T_{max} if using an impact driver. Ensure not to overtighten.</p>	
4		<p>Check to ensure that you have full contact of screw head with fixture.</p>	

For other anchor properties, please refer to the ETA on our website.
